*Early American imprints, 1639-1800.*
This collection, based upon Charles Evans' *American Bibliography*, includes more than 40,000 English language books, pamphlets, and broadsides printed in the United States from 1639 through 1800. It also includes many government documents for this period and about 100 theses from Harvard University, about 40 from Yale, and several from Princeton. It does not include serials, but the publishers corrected many Evans errors and added several thousand titles not in Evans. The collection is arranged chronologically by Evans number and is continued by *Early American Imprints* (Shaw-Shoemaker, 1801-1819).
