Disappearing Act Show to Accompany Summer Celebration

MILWAUKEE (April 4, 2017) — The Manfred Olson Planetarium is hosting Disappearing Act; an eclipse-themed show to accompany our solar eclipse celebration on August 21. The show will begin on July 21 and play until August 18 on select Thursdays and Fridays at the Planetarium.

This show will break new ground for the planetarium because each one will be led by our student staff members. Robin Mello from the Peck School of the Arts trained the staff in theatre performance. “The experience really brought me out of my comfort zone,” said staff member Derek Palecek. “I learned a lot about what Jean has to do for a performance from this experience.”

The show aims to get everyone up to speed before the celebration in August. See the show – put dates in here -

The UWM Manfred Olson Planetarium is located on 1900 East Kenwood Boulevard in the Physics building at the corner of Kenwood Boulevard and Cramer Street. With over 10,000 visitors annually, the Planetarium is a center for both astronomy education and appreciation. A variety of programs are available to the public including AstroBreaks, Friday night shows, and stargazing on select evenings throughout the year. School and private group visits are also available. Please see our website at planetarium.uwm.edu for details on all our programs.
