Witness the Splendor of the Solar System with the Manfred Olson Planetarium

MILWAUKEE (May 20, 2017) – Witness the immense beauty of our very own solar system with Splendor of the Solar System at the UWM Planetarium on June 9, 16, 23, 30, and July 7, 14. Our live, interactive production will take you on a tour of the solar system using the innovative Uniview program. Learn how the planets came to be and see powerful storms and planets up close. We will also go beyond the solar system with a view of the entire observable universe. Then we’ll finish with an indoor stargazing session and look for popular constellations away from city lights.

The UWM Manfred Olson Planetarium is located on 1900 East Kenwood Boulevard in the Physics building at the corner of Kenwood Boulevard and Cramer Street. With over 10,000 visitors annually, the Planetarium is a center for both astronomy education and appreciation. A variety of programs are available to the public including AstroBreaks, Friday night shows, and stargazing on select evenings throughout the year. School and private group visits are also available. Please see our website at planetarium.uwm.edu for details on all our programs.
