

IACUC Guidelines for Animal Adoptions/Acquisitions by Individuals at UWM

Last Review: 4/2022

Revision History:

Animals that have concluded studies may be made available for adoption/acquisition by individuals. The animals must be healthy at the time of adoption/acquisition as determined by the Veterinarian. The animals must not have had any type of chemical/hormone treatments or surgical procedures performed on them prior to the adoption/acquisition. The animals must not be transgenic or immunodeficient.

Individual requests should be made to the Veterinarian or Animal Care Manager. Requests must come from individuals associated with a UWM Investigator to ensure proper animal care training has been completed.

The appropriate forms must be completed prior to the adoption/acquisition.
