

UNDERGRADUATE CERTIFICATE IN

ENTERPRISE RESOURCE PLANNING

WHY STUDY ENTERPRISE RESOURCE PLANNING?

Enterprise resource planning (ERP) systems are critical information systems that connect a company's operations, including purchasing, production, sales, service, accounting, supply chain, finance and asset management, and customer/supplier relationships.

There has been a rapid increase in the number of organizations looking for professionals with Enterprise Resource Planning skills. In the Lubar College's ERP Certificate program, you'll not only develop knowledge in ERP, but you'll also develop mobile ERP applications and participation in an ERP simulation game to make your learning more "real." You'll also get hands-on experience with UWM's SAP HANA appliance.

Because the Lubar College is home to one of only five SAP University Competence Centers in the world, Lubar faculty have extensive ERP teaching experience.

Through the coursework, you'll be prepared for the TS410 certification exam.

CERTIFICATE OUTLINE
