

NEW

Online Opportunities

These courses are the perfect opportunity for:

- Communication Sciences and Disorders majors looking for summer learning opportunities
- Students from other majors who need the prerequisites to apply to graduate programs in speech-language pathology
- Students and professionals from affiliated fields who wish to increase their knowledge of communication sciences and disorders

ABOUT THE COURSES

The instructors for each of the courses completed intensive training in the development of effective online courses. Each course engages students in active, student-centered learning using best-practices in online education. Students enrolling in these courses are not required to be enrolled in degree programs at the University of Wisconsin-Milwaukee. All online courses are affordable and offered at competitive rates.

Online Offerings in Communication Sciences and Disorders

The Department of Communication Sciences and Disorders at the University of Wisconsin-Milwaukee is excited to announce the availability of online offerings of three gateway courses required for admission into graduate programs in speech-language pathology. The following courses will each be offered during the summer term:

220: Anatomy and Physiology of Speech, Language, and Hearing Mechanisms (4 credits)

Students will study anatomical structures and functions as they relate to normal speech, language and hearing. Topics include neuroanatomy, anatomy and physiology of articulation, phonation and respiration.

230: Introduction to Phonetics (4 credits)

Students will study the production and perception of English speech sounds using the International Phonetic Alphabet. Topics include physiological, acoustic and clinical phonetics. Upon completing the course, students will be able to complete broad phonetic transcription.

240: Normal Speech and Language Development (3 credits)

Students will study children's speech and language acquisition from birth through adolescence. Topics include the major speech and language developmental milestones, theories of speech and language development, research techniques for investigating children's speech and language behavior, and the interrelationship between language and other aspects of development.
