Executive Functioning for Child and Family Well-being

John Till, The Family Partnership
Jennifer Winkler, Children’s Wisconsin
Luke Waldo, Institute for Child and Family Well-being
Goals

• Learn about executive function and self-regulation skills
  • What they are and why they’re important

• Share the Executive Functioning Across Generations® model
  • Design & results
  • Virtual home visiting adaptations

• Share the Mobility Mentoring model
  • Design & results
  • Child welfare adaptations

• Lessons Learned
What is Executive Functioning? Why is it important for child and family well-being?
Executive Functioning

Refers to coordination of multiple types and streams of information in order to arrive at the more effective course of action, including prioritizing tasks, goals, and information. Executive functioning is a skill developed through practice, using age appropriate experiences.

- **Working memory**: The capacity to hold and manipulate information in our heads over short periods of time
- **Mental flexibility**: The ability to adjust to changed demands, priorities, or perspectives
- **Inhibitory control**: The ability to resist impulsive behavior
Executive Function/Self-Regulation Skills

• Harvard Center on the Developing Child calls EF/SR Skills “Core Capabilities for Life”

• Key skills needed to:
  • Learn how to learn, succeed in school
  • Make and keep friends
  • Develop healthy relationships
  • Make healthy choices
  • Get a job, keep a job
  • Nurture healthy children
Adults need a certain set of skills to get and keep a job, care for children, manage finances, and contribute productively to a community. We must be able to focus, plan ahead, avoid distractions, and shift our behavior. Adult Core Capabilities support being able to manage these tasks:

- Attention
- Self Regulation
- Executive Functioning
  - Working Memory
  - Inhibitory Control
  - Mental Flexibility
Attention

Attention is the critical gatekeeper that's needed to effectively self-regulate. We need to be able to direct our attention toward specific things within and around us and monitor what is happening with them. Attention includes that moment-by-moment awareness of thoughts, feelings, behavior, performance, and progress toward a goal, as well as your surroundings and context, such as others' behavior and how it may influence you.
Self Regulation

Self-Regulation is a set of capabilities that help us to draw upon the right capabilities at the right time, manage our response to the world, and resist inappropriate responses. There are two types of processes:

- **Intentional** self-regulation is a conscious effort to set and stick to a plan and inhibit counterproductive or distracting response to situations. This is sometimes thought of as goal directed behavior.

- **Automatic** processes are fast, non-conscious management of response to the environment. This is thought of impulsive behavior, or fight, flight, or freeze responses.
Where is self-regulation located in the brain?
Executive Function Is Language-Based

• Importance of Internal State Words for EF
  • Perception
  • Physiology
  • Volition/ability
  • Emotion/affect
  • Cognition/Mental state
  • Obligation/moral judgment

• Ability to connect the ISWs to Personal Narratives
Personal Narratives

- Stories that we tell about ourselves and our experiences.
- First narratives to develop.
- Important to the development of self awareness and executive functioning.
- Link external events with our feelings, thoughts, and reactions through the use of internal state words.
ACEs, stress, & Executive Functioning

Stress makes it harder for people to optimize the decision-making and behavior management skills most needed to fully engage and persist in programs that might help them.

- Poverty
- Needing to juggle too much
- Too few resources
- Too few opportunities to get out of poverty
- Persistent social bias (both class-based bias and racism)
- Trauma
- Community violence
- Violence in the home
- Housing instability or homelessness
- Lack of income or education
- Etc.
Can the COVID-19 Pandemic Undermine EF?

Family Strengths

- Strong relationship between income and family strengths
- Families tend to rally in crises
  - Death of a family member
  - Family member with a serious health concern
- Chronic household stressors:
  - Conflict between adults and children
  - Household tasks left undone
  - Children not completing assigned chores

COVID-19 and Toxic Stress

- Increased economic stressors on households
- Prolonged uncertainty
- Sudden, new household responsibilities (e.g., remote learning)
- Isolation and confinement without breaks
- Fear, prolonged illnesses, a feeling of encirclement and impending doom
How have you designed and implemented Executive Functioning programming into your work?
Executive Functioning Across Generations© is a two-generation (2Gen) intervention designed to boost executive functioning with children and parents

- **Children’s Curriculum (3-5 year olds)**
  - Daily delivery in groups of 5 children, 26 lessons
  - 6-8 weeks for delivery, 45 minutes per day
  - Focus on acquisition of Internal State Words and development of Personal Narratives
  - Books, songs, activities

- **Parents’ Curriculum**
  - Group delivery, 3 sessions, about 2 hours with breaks and food
  - Help parents learn practical brain science
  - Focus on recognizing and supporting children’s acquisition and use of Internal State Words and development of Personal Narratives
  - Curriculum familiarizes parents with types of activities used with children
Executive Functioning Across Generations – The Family Partnership

STRATEGIES
Program actions

Teachers deliver developmentally appropriate curriculum, and teach internal state words, theory of mind, and personal narratives.

Staff facilitate parent groups covering BITSNs: brain science, internal state words, theory of mind, serve and return, and personal narratives.

Encourage parents to practice BITSNs at home

TARGETS
Knowledge, skills, etc. directly targeted by strategies

Children increase knowledge of BITSNs

Children use BITSNs in classroom

Children use BITSNs in home

Parents increase knowledge of BITSNs

Parents use BITSNs with children

Parents use BITSNs for self

OUTCOMES
Ultimate goals

Children increase EF/SR (inhibitory control, working memory, cognitive flexibility)*

Adults increase EF/SR*

Decreased parenting stress

Increased positive parent-child relationship (attachment, co-regulation)

Increased parent satisfaction with child

Decreased CPS and justice system involvement

MODERATORS … *that may decrease efficacy:* Caregiver mental health, caregiver misalignment, environmental factors (poverty, stability, stressors, caregiver stress level), staff buy-in, dosage (less dosage, less effect–child or adult attendance, home practice), and biological brain differences (e.g., FAS);

… *that may increase efficacy:* Cultural context of families (including intergenerational practices that mutually reinforce learning), depth of protective networks, and cultures/communities excited about brain science

*Outcomes with existing measures
New Evaluation Tool: MEFS

Minnesota Executive Function Scale (MEFS)

- Developed by Reflection Science at University of Minnesota; Stephanie Carlson, Ph.D. and Phil Zelazo, Ph.D.
- Tablet-based app
- 5 minutes to take
- No minimum interval before reuse
- Only early learning readiness assessment usable with children as young as two years old
- Base pricing $10/child/year, but as low as $5/child/year with volume
How It Works
Virtual Home Visiting Adaptation - Why Do This?

- EF is a core capability for life – caregiver needs to stay on track with goals, get a job, keep a job, keep cool, be flexible, provide consistent parenting
- Understanding EF as an enhancement of what home visiting already offers
- EF helps counteract ACEs and build resiliency
- We frame it as a BOOST for the parent and potentially for the child
- Something for “older” kids in the household, ages 3-5
Virtual Home Visiting Adaptation

- National partners: Nebraska Children’s Home Society, Children’s Wisconsin, HCDC-FOI, Children’s Home Society of America
- TFP owns the design; Chris Wing is our curriculum developer
- Pilot exclusively with HFA sites in Fall 2020
- Feasibility Study
  - Can the intervention be implemented?
  - Is it acceptable to clients?
- “Start Small and Learn” Philosophy: Fast Cycle Evaluation; Amy Susman-Stillman of Future Services Institute is our evaluator
- Additional statewide MN pilots planned for 2021 (no EBP requirement)
Family Support’s HCD Journey

• Home Management wasn’t working!
  • Too nebulous
  • Too much “resource giving” and not enough skill building
  • Ineffective training

• Started an Innovation Project Team and used HCD techniques to explore our problem and figure out a solution
  • EMPath’s Mobility Mentoring
EMPath
Economic Mobility Pathways

Introduction

Mobility Mentoring® is the professional practice of partnering with clients so that they may acquire the resources, skills, and sustained behavior changes necessary to attain and preserve their economic independence. This innovative approach is integrated throughout EMPath services. This report shares the reach of Mobility Mentoring and its effects on the families and individuals engaging in this transformative practice at EMPath’s program sites in Greater Boston.

About EMPath

Economic Mobility Pathways (EMPath) is a global leader in helping low-income people reach the middle class and beyond through its science-based approach to mentoring. The approach helps families achieve dramatic gains in income, housing, education, family life, and career. EMPath uses the approach in its direct service work to support families in Greater Boston and through its Economic Mobility Exchange™, a partnership with non-profits, governments, and human service providers nationally and across the globe.

Where on the ladder from 0–10 do you feel you personally stand right now?

Average Annual Earned Income at Entry and Most Recent

Baseline

$17,056.08

Most Recent

$23,093.64
July 2018 – June 2019

- July - August: Learning more about MM
- September: Empath Training
- October - November: Adapted MM Tools
- December: Introduced MM to FS leadership
- January - February: Introduced MM to the larger leadership team, Focus Groups with FSS
- March - May: Focus Groups with professional partners, Finalized our Theory of Change, Started MM training with FSS
- June: Launched MM

July 2019 - Now

- July – August: Established an MM community of practice, Partnered with Data Analysts, MI Training
- September - December: Incentives and FTM Prototypes
- January – March: Built Reporting and additional CareManager Functions
- April to June: Transitioned MM practice to virtual setting due to COVID-19
- July to Now: Refresher trainings, Focus on enhancing practice
Our MM definition:

Mobility Mentoring is the professional practice of partnering with clients so that over time they may acquire the resources, skills, and sustained behavior changes necessary to attain and sustain family stability and independence.
Mobility Mentoring

MM is based on the assumption that, if individuals can be engaged to optimize their outcomes in the critical areas of the Bridge, they are more likely to achieve stability and independence than if they tackle any one critical area alone.
Mobility Mentoring®: Essential Elements

- Goal Setting and Outcomes Measurement
- Incentives
- Bridge to Self-Sufficiency®
- Coaching

Executive Functioning (EF) Informed
What lessons have you learned from the design and implementation of these Executive Functioning-informed models?
Lessons Learned from EF Across Generations

- Results of first three cycles of preschool pilots are promising!
- Frame EF skills as a Boost rather than as new label/remediation
- Staff receptiveness to Mind-Body Medicine informed approaches varies with culture and previous experience
- Parents are very interested in brain science and EF skills
- Social-emotional learning groups require shifts in classroom organization and scheduling
- Shift from delivery in preschool environment to home visiting shifts focus of intervention to parents
- Importance of creating communities of practice with staff to support implementation
