Methods Engineer -> My team does the following for roadway design at WisDOT:

- Figure out how to do stuff
- Build software standards and customizations
- Deploy those standards and customizations to anyone who wants them
- Show people how to do the stuff we figured out
- Support them when they run into problems

What that really means day-to-day:

- We're Civil 3D Jedi masters
- No serious lightsaber injuries to date

So how do Civil 3D projects normally work?

- One to many editors
- Dozens to hundreds of working files
- Hundreds to thousands of connections between files
- Collaboration is easiest if everyone is on the same network

So what if everyone is not on the same network?

- Small-scale: manual sync, generic clouds (Box, SharePoint, DropBox)
- Old, large-scale: FTP site
- Recent, large-scale: ProjectWise site (or Vault)
- In development: Autodesk Construction Cloud

BTW, is this topic really that important?

- Are project staff working out-of-the office?
- Are project staff working at different offices (in the same organization or in different)?
- Is it important to keep a single source-of-truth for project files and avoid users overwriting each other's work?

Then, I got an email, March 2021...

- Project Chief out of the Green Bay office says,
 - The I-41 is funded again. [I-41 Project \(wisdot.gov\)](https://www.wisdot.gov)
 - We want to staff it with in-house teams and consultant firms
 - We want everyone on the same platform with as close to realtime access to the files as possible
 - **What do you recommend?** (this needs to work)

No crystal balls for decision-making

- Civil 3D projects in ProjectWise work, but not awesome.
- From what we knew, ACC wasn't quite ready, but close.
- Did we trust AutoDesk would address our needs fast enough and accurately enough?
 - The best way to do that is to have them row the "project cannot fail" boat with you.
 - To the cloud!  

Some things to understand

- Cloud: A computer that you work on that someone else owns.

§ https (web) protocol

- Oct 2022: there is a lot of cloud storage, not much cloud computing

Some things to understand

- The **ONLY** time you are working directly on the cloud is when you are in a browser. If you are in software, you are working on a local copy. This means:
 - Synchronization
 - File locking (One user edits one file at any one time)
 - Most file formats do not have native browser editing

Some things to understand

- The expectation/business need is that it just works as fast and easy as a local network
- The reality is there is a whole world of computer stuff that you don't control being added to the equation

February 2022: What did we show them?

- Local sync managed by Desktop Connector (DC, local app built to manage syncs)
- Very little change to Civil 3D interface
- All Editors need an AutoDesk BIM Collaborate Pro license in addition to a Civil 3D license
- All Editors need to be added to the site and the project.

Where are we at in October 2022?

- Over 200 users in the project assigned to 15 business groups. New users added every week
- 9 Civil 3D Design projects, 3274 DWGs
- ACC is currently passing the scream test 🧐.

What have we learned?

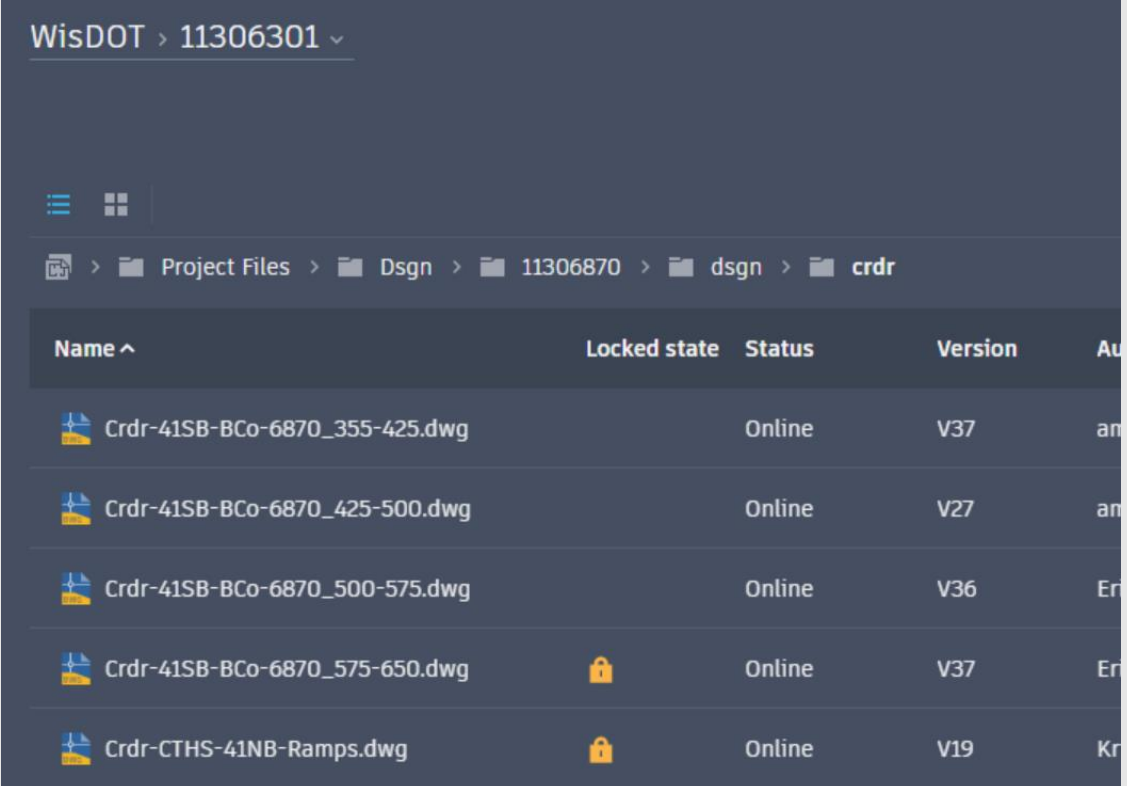

- Desktop Connector is critical. Keep an eye on syncs.
- ACC does not make your internet connection any faster.
- Desktop Connector is currently too aggressive in the depth of current version it checks with file references for our business needs.
- Autodesk working on addressing this and many other items

What have we learned?

It works 👍

- Automatic file locking
- Access to all files with appropriate permissions

WisDOT > 11306301

Project Files > Dsgn > 11306870 > dsgn > crdr

Name ^	Locked state	Status	Version	AU
 Crdr-41SB-BCo-6870_355-425.dwg		Online	V37	an
 Crdr-41SB-BCo-6870_425-500.dwg		Online	V27	an
 Crdr-41SB-BCo-6870_500-575.dwg		Online	V36	Er
 Crdr-41SB-BCo-6870_575-650.dwg		Online	V37	Er
 Crdr-CTHS-41NB-Ramps.dwg		Online	V19	Kr

What have we learned?

- Users can restore their own file

The screenshot displays a file management interface. On the left, a file named "TestXrefBaseShared.dwg" is listed with a blue restore icon. On the right, a "Version history" dialog is open, showing three versions of the file:

Version	File Name	Uploaded by	Timestamp	Actions
V3	TestXrefBaseShared.dwg	Mitch2 Lavin	Mar 24, 2022 1:54 PM	Download, Restore, CURRENT
V2	TestXrefBaseShared.dwg	Mitch2 Lavin	Mar 24, 2022 1:44 PM	Download, Restore, Make Current
V1	TestXrefBaseShared.dwg	Mitch2 Lavin	Mar 24, 2022 1:37 PM	Download, Restore, Make Current

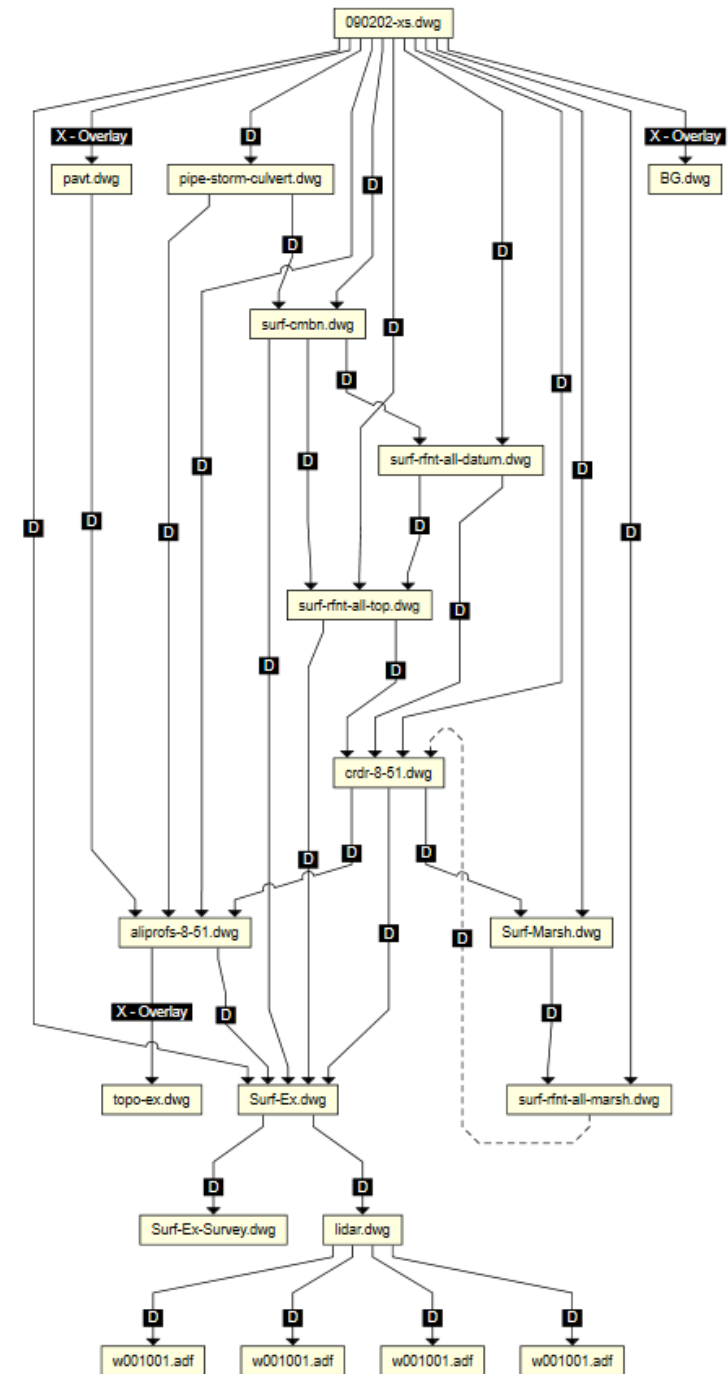

What have we learned?

- Sheet set manager had some issues, resolved in latest DC release (requires C3D2023).
- NO server to manage! (Just permissions and users)
- Reference Explorer in DC is AMAZING tool to analyze file connections.

What have we learned?

- Reference Explorer in DC

What have we learned?

- Web functionality is nice
 - super fast viewing of large files
 - ability to share public link to anyone [Surf-Rfnt-Southbridge-All-Top-MDU.dwg](#) Link will time out on Halloween 🎃
 - ability to compare versions
[ipit-2022-trnsprtatn-dsgn-collab-01.mp4](#)

What have I learned/remembered?

- Today's collaboration expectations are everything works immediately, perfectly, constantly
- In technology, the future is safer than the past
- No matter how good technology is, good communication is critical
