In November, UWM’s AGS Library and Manfred Olson Planetarium are collaborating on a series of talks about celestial maps. There will be 3 “AstroBreaks” held at the Planetarium and a lecture at the AGSL. The Astrobreaks, presented by Planetarium Director Dr. Jean Creigton, will be held on Wednesdays from 12:15-12:45, at the Planetarium, with the following topics:

- **Nov. 4**—how star charts were used to map the sky and how they evolved over time.
- **Nov. 11**—how styles of star maps can reflect scientific and/or philosophical viewpoints.
- **Nov. 18**—how specific heavenly bodies and celestial phenomena were depicted up to 1900.

On **Nov. 8**, AGSL Curator Marcy Bidney will talk at a Map Society of Wisconsin meeting about the unique blend of artistry and science during the Golden Age of scientific discovery that is well represented on celestial maps, with a focus on the development and history of celestial cartography. Examples from the AGSL’s collection will be displayed.

**Free and open to the public!**
