Digital Humanities tools/methods: StoryMap JS / ArcGIS StoryMap / Timeline JS; digital archives; visual storytelling

Description of assignment:

Working in teams of two, each pair of students chose their own topic for creating a Wisconsin Humanities Council grant proposal, whether real or hypothetical. They completed primary and secondary research in order to prepare the proposal for a local public history project. Though the projects represented a range of research interests, they shared an objective based on the assignment: to connect a present-day community, institution, neighborhood, or place, with either a significant period of change or a meaningful set of events in the past.

Each team member then used Story Maps to create a digital humanities project for presenting their independent research with the intention of reaching a wider public audience. Their Story Map projects could do one or more of the following: (1) compare maps from different historical eras; (2) present a series of maps in a tabbed format with commentary; (3) construct a narrative cascade that integrates a variety of visual, textual, or audiovisual elements; and/or convey their research findings through another Story Map format, such as Timeline JS.

Outcomes:

Students wrote reflections on the DH project at the end of the term, and they described a number of positive outcomes. Among the things they appreciated most were:

- the experience of working directly with members of the community to create a project of lasting value which filled an existing need, such as outreach or public education;
- the opportunity to do primary research (e.g. using archival photographs, maps, & documents), which involved analyzing and arranging their data in order to create an accessible narrative;
- the benefit of having a finished DH project, which could help them while working at a current job and/or promised to be an asset when searching for future employment.
- In some cases, this project was a chance to revisit a familiar topic the students felt passionate about, while they also were able to how to present that history in a new way.

Students described a sense of confidence after having completed a polished DH project, and nearly all of them expected to apply these newly acquired skills to other projects in the future.
Sample assignments:

*NB: Teams submitted either two single-authored DH projects or one joint DH project.*
