

PARTICIPANTS NEEDED FOR A RESEARCH STUDY

“Body Composition and Energy Expenditure in Youth with Spina Bifida”

Who: Children with spina bifida 5-18 years of age.

What is Involved: You and your child will attend a 5-hour visit at Children’s Hospital in Wisconsin. During the visit, your child will have multiple measures of height, body composition and energy used during rest and activity.

During and after the visit, your child will wear an activity tracker on their wrist for 7 days. On day 7, you will collect two urine samples from your child and mail the samples and activity tracker back to the study team.

Your family will receive two gift cards as a thank you for your time and participation.
