Project Management Certificate

Effective project managers use a variety of tools and techniques to deliver quality projects on time and within budget. The Project Management Certificate helps you develop skills and knowledge that you can bring to traditional and agile business environments. Taught by instructors with industry and academic experience, the program offers a wide range of core and elective courses. Customize the Project Management Certificate to meet your professional goals.

Project Management – Advanced Certificate

Top project managers are those who continue to invest in their training and development. The Project Management – Advanced Certificate gives established project managers the opportunity to develop the critical reflection and planning skills that complex projects require. The program is for those who have earned a Project Management Professional (PMP)[®] credential or UWM Project Management Certificate. Choosing from a variety of courses, you structure your certificate to satisfy your professional needs.

Agile Project Management

Quickly responding to changing conditions is critical to success in today's business climate. When properly executed, agile development rapidly generates the project outcomes and deliverables that your business requires to compete in fast-paced marketplaces. This course provides an overview of agile from the Agile Manifesto to how it is being used today.
